## Annapolis Center's Children's Health Initiative

### Phase One: Children's Health Poll

The Annapolis Center will commission a poll will be done of pediatricians and emergency room doctors to determine their perceptions of what is placing children at most risk. A second poll would be commissioned to ask the same questions of parents. This poll will provide a good baseline or overview on the current state of children's health and whether it is getting better or worse and would be conducted on an annual basis. It is understood that this poll will address acute rather than chronic injuries and diseases. The poll will also attempt to determine which hazards are increasing.

This poll will be commissioned in January or February of 1999.

### Phase Two: Workshop on Children's Health

The Center will plan a workshop, inviting such organizations as the Children's Defense Fund and other advocacy organizations, to compare and prioritize, in their minds, the hazards to children.

### Phase Three: Conference on Children's Risk: Compare and Prioritize.

This conference would be a follow-up to the workshop and poll. The conference is to discuss the baseline the Center has developed, the results of the workshop, and identify where there are knowledge gaps. One of the major focuses of the conference would be issue of Obesity\* and children.

### Phase Four: Children's Health Workshop(s)

One or two workshops will be planned on the issue of children's health in general, and addressing specific issues in assessing risks of the following:

- Low Frequency Radio (LFRs)\*;
- Endocrine disruptors\*; and ,
- Asthma\* (indoor air and particulate matter).

\* These issues would be examined in the context of *The Annapolis Accords for Risk Analysis*.
